test rows set aside
repeated inside every CV fold
1
Frame
target, unit, prediction time
2
Audit data
units, gaps, null codes, EDA
3
Split
lock the test set early
4
Prepare
impute, scale, encode
5
Train & tune
fit and compare with CV
6
Test once
locked pipeline, one estimate
7
Deploy
monitor drift and errors
iterate on validation scores, not test
errors and drift in operation send you back to framing
