Frame and data contract
target, horizon, units
Train and tune
pipelines, inner CV
Validate and calibrate
frozen test, threshold
Deploy
versioned model + policy
Monitor, with a pre-agreed response for each signal:
input drift (PSI, KS)
stuck or missing sensors
score distribution
alert rate vs capacity
reviewed precision
event recall (late labels)
reframe if the decision changed
Review trigger
recalibrate, retrain, or retire
evidence of drift or decay
Monitor
inputs, scores, alerts, outcomes
