Outer loop: estimate the procedure
Outer 1
test
Outer 2
test
Outer 3
test
Outer 4
test
Outer 5
test
its training rows
Inner loop: tune on them
val
val
val
val
Pick the best settings
mean inner validation score
Refit on all outer training rows
same pipeline, chosen settings
Score once on the outer test fold
never used for any choice
Tuning happens inside every outer training split, never on its test fold
Repeat for each outer fold: 5 test scores estimate tuning + fitting together
